Design Services

Netafim has a fully equipped design office based in Adelaide with full-time professional irrigation designers and drafters, servicing Australia, New Zealand and the Asia Pacific Region. The department is quality endorsed and meets ISO 9001 standards.

All of our designers are Certified Irrigation Designers (CID) with the Irrigation Association of Australia (IAA). For the past 10 years, the department has designed over 10,000Ha. Their extensive knowledge and training is complemented by powerful design software.

The Australian design office is part of the Netafim global design network, which is constantly training, upgrading and exchanging ideas on the international arena.

"I have been designing agriculture, greenhouse and landscape irrigation systems within Netafim for the past seven years. Prior to Netafim I spent six years within the building industry as a mechanical designer. I have been involved with designing some of the largest agricultural irrigation systems in Australia for a broad variety of crops. Landscape projects I have designed include golf courses, large domestic estates, sporting fields, parks, retirement villages and council streetscapes.

Gennaro Vellotti, Netafim Australia Design Department Manager
 Bachelor of Technology in Mech. & Manuf. Engineering, CID Agricultural Drip Micro ADM2111
 CID Landscape/Turf Commercial LTC2121, CID Agricultural Sprinkler ASP2134

Netafim Design Department Process

The design process initially involves a consultation between the Netafim Sales representative, Netafim dealer and customer to gather information and prepare a design brief. This information is converted into an irrigation design and drafted in AutoCad to a high standard. The design is submitted to the dealer and customer for approval and adjusted as required. This process ensures that the design is completely tailored to the customer's specific requirements.

The design office delivers a prompt and efficient turnaround time with all designs.
